git push <remote> <branch>
```

```
git init
git clone <url>
git remote add <name> <url>
```

```
git branch
git branch <name>
git checkout <branch>
git merge <branch>
```

Private workflow

- 1 developer
- 1 private repository
- 1 branch (master)
- git only

Public workflow

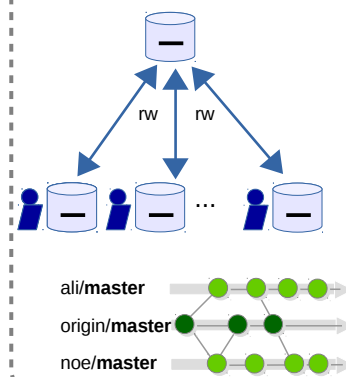

- 1 developer
- 1 public repository
- 1 private repository
- 1 branch (master)
- git (+ github)

Shared master workflow

- n developers
- 1 shared repository
- m private repositories
- 1 global "master" branch
- 1 "master" branch per user
- git (+ github)

Branch workflows

- n developers
- 1 shared repository
- m private repositories
- 1 "master" branch
- 1n branch per feature
- git (+ github)

Feature branches

gitflow

- Key:**
-  developer
 -  integration manager
 -  repository
 -  git command

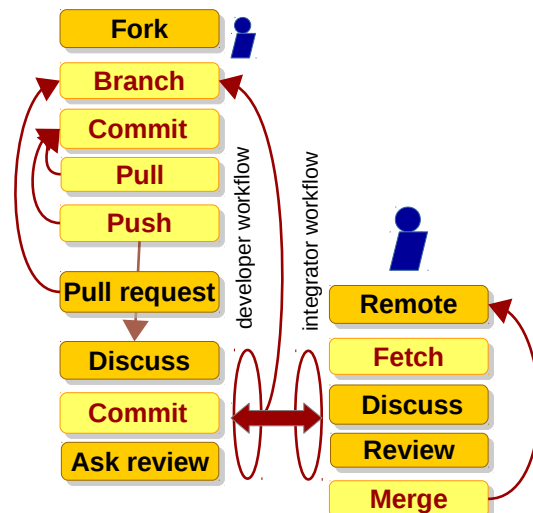

-  long-lived branch
-  short-lived branch
-  commit
-  merge

- r** read
- w** write
- fk** fork
- pr** pull request
-  release
-  pull request
-  review
-  discussion
-  test

Integration Manager workflow

- small/medium open source projects
- 1 blessed repository
- 1 integration manager
- n developer
- n public repository
- n+1 private repository
- m branches
- git (+ github)
